# ACCESS IN A CONFINED SPACE

## DESCENT/RESCUE SYSTEM

New standards are now applied regarding staff safety and in order to make your installations compliant with these standards, we offer the fitting of a complete evacuation and rescue device, which insures a maximum safety, as far as an intervention has to be carried out in a confined space.

GEPS Services together with its partner specialised in PPE (personal protective equipment) takes this initiative and innovates in safety field.

According to your needs and expectations, we are able to offer the best technical solutions, to anchor the brackets on new tanks as well as in revamping operations.

Tank surroundings are taken into account and the solutions that we offer allow to adapt to any situation. For each installation, we study and warrant the feasibility with our design office, via a finite element calculation note.

*Examples of adjustments on decking with flush baseplate*

AS SAFETY IS  
A PRIORITY,  
GEPS SERVICES COMMITS  
TO ACCOMPANY AND  
GUIDE YOU IN MAKING  
YOUR CHOICES.

Brackets have an adjustable offsetting, they are designed by our partners who are specialised in fall-prevention equipment, rescue and access in confined space. Their certifications ISO 9001-2000 guarantee the equipment reliability and performance. Their anchorage equipment are in compliance with safety standards, including European directive 89/696/EEC and European standard EN795.

#### STANDARDS

EN 12841/C	Rope access systems: emergency device
EN 341	Descender device
