# PED\* TANKS FOLLOW-UP

\*Pressure superior to 0,49 bar

In France, inspection and periodic requalification are obligatory tests for PED tanks and have to be carried out according to a modified ministerial ruling of 2017/11/20.

Each country has to respect obligatory controls, defined by its national authorised body. We can contact them and collect the information in order to help you to schedule these tests and do them in the best way.

Maintenance

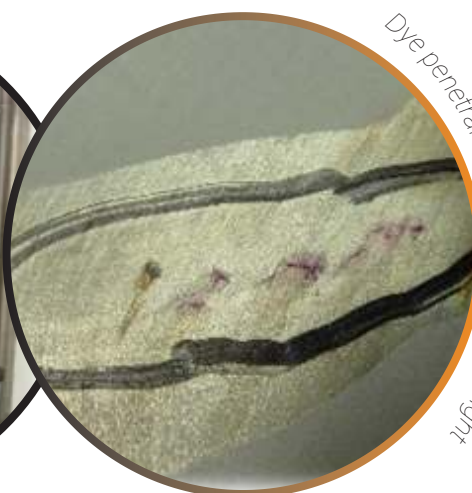

On-site hydraulic test
